

Spee-D™

Suitable for people
with swallowing
difficulty

Spee-D™

ORAL FILM TECHNOLOGY

Once weekly

50,000 IU

Fast absorption

VITAMIN-D

Persistent pain is associated with vitamin D bone demineralisation, myopathy and musculoskeletal pain. Pain pathways associated with cortical, immunological, hormonal and neuronal changes are potentially also influenced by vitamin D levels. Vitamin D levels have been found to be low in groups of patients with various pain states.

Orally fast dissolving films are a new approach to oral drug delivery technology. The fast dissolving films are gaining interest as an alternative to oral tablets, capsules or effervescent dosage forms. The films are designed to dissolve upon contact with a wet surface, such as the tongue, within a few seconds, meaning the consumer can take the product without need for additional liquid.

DO NOT SWALLOW

NO WATER NEEDED
